

# SERIES TL INDICATOR LIGHTS

Policing your access in style

For a correct visual and/or acoustic management of the installations, the luminous indicators combine design, robustness and functionality.

The curvature of the green and red indicator, allows to expand the beam of light in a homogeneous way and to be visualized from all angles. Depending on the position of the jumper, the status of the indicator will remain permanent or intermittent.

Operates from 10 to 24V AC/DC.

ACCESSORIES

TL
